

Nova Sales Opportunity Intelligence - Steering Committee Pack

Meridian Group | NOVA | Synthetic enterprise project artifact

Executive Summary

Nova Sales Opportunity Intelligence is a Meridian Group transformation initiative in Sales. The project goal is to assist strategic account teams with evidence-backed opportunity recommendations. This pack captures business context, dependencies, risks, and governance decisions rather than acting as a technical-only status report.

Business Context

Leadership expects the project to protect the intended operating outcome while making scope, ownership, and cross-project dependencies explicit. Point-in-time status must not be mistaken for permanent truth when later steering decisions supersede it.

Delivery and Dependencies

The project team tracks dependencies through named owners and steering escalation. A dependency delay triggers resequencing analysis before any milestone change is approved. Shared SMEs may support multiple Meridian Group programs, so availability itself can be a project risk.

Governance

Architecture, product, business analysis, QA, client stakeholders, and change management each own part of the decision trail. Superseded approaches remain retained as historical context so future teams can understand why the current model exists.

Top Risks

Risk	Owner	Status
Inconsistent sales notes	Rachel Williams	Open
Recent-meeting bias	Farah Joshi	Mitigating
Qualification disagreement	Sara Brooks	Watching
CRM permission variance	Meera Nguyen	Open
Poor evidence quality	Vikram Green	Mitigating

Leadership Ask

Confirm that material scope and architecture changes remain traceable to decisions, client impact is visible in prioritization, and cross-project dependencies are escalated with options rather than absorbed silently.
